DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, 7-14, 17-23, 25-30, 33-39, 41, 44, 46, 47, 49-55, 58-63, 65, 69, 70, 73, 74, 77, 78, 81-91 and 136-155, drawn to frequency translating of a signal in a receiver circuitry having inphase and quadrature paths, classified in class 455, subclass 323.
 - II. Claims and 92-135, drawn to frequency translating of a signal in a receiver circuitry having a single path, classified in class 455, subclass 302.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions can be used to minimize phase delay error (invention I) and suppress unwanted frequencies in the received signal (invention II).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
